

A Total Project Management Solution

D1130 - Equipment Master

Project: PROJ Schema: NONE Component Of: []

Flag Equipment No: [] Location: []

Eq. Type: 029 Stat: A Cat: 04 Sys: 30 Revision: 0

Res Date: 29-DEC-1999

Eq Package No: BP450-H-001

Quick Cr Commodity No: 1003 Q-1455-A

Remarks: []

Description	Attribute Value	UoM	Description	Attribute Value	UoM
Data Sheet Reference No	1198-GSKD-19927		Vapor Pressure	320	KPA
Capacity	61	CMH			
Differential Pressure	358	KPA			
Discharge Pressure	358	KPA			
Minimum Continuous Flow	30	CMH			
Impeller Diameter Rated	180	MM			
Suction Pressure	295	KPA			
Pumping Temperature	126	C

Developed & Supported by AMEC Technologies

In today's fast-paced business environment, project management is more than just planning and schedule reporting. Managers are faced with the dilemma of juggling multiple tasks while trying to execute their projects to predetermined quality, cost and schedule objectives. Impacting performance are the worldwide sourcing of materials, the need to demonstrate regional benefits and the requirements of both external and internal audits.

The success or failure of a project hinges on the ability to manage divergent issues, bring information together into an integrated system and provide clients with an accurate view of the whole project.

Project Managers need daily up-to-date data in order to identify potential problems and maximize opportunities.

Convero-AMEC's Project Management System-is a software package that combines proven principles and procedures with the latest in computer technology. Convero provides today's project managers with a complete solution to support their project needs.

Convero operates in either a web-based or client-server environment and includes a fully-integrated information management database.

Based on over 90 years of engineering experience, Convero is the project management technology of choice for many of the world's largest energy and infrastructure projects.

Features and Benefits

A complete and fully-integrated project management system, Convero eliminates the need for multiple systems. Clients are ensured that their project data is secure and remains in one place.

Integrated Common Database

Providing a single source of data

- Eliminates duplicate effort
- Reduces the margin-for-error, project overhead and time spent on reconciliation
- Promotes communication
- Leverages information and improves project performance

Expandable

- Allows a project to start small with room to grow
- Minimizes up-front expenditures
- Ensures that the project never outgrows the application

Flexible

- Available to high level owners and/or Project Management Office
- Can serve as the detailed contractors system

Auditable

- All data is entered with user ID and date stamp
- Key data is maintained by change logs
- Sophisticated security allows multiple parties to access the same database

Supports Multi Level Organization

- Executive high-level inquiries and reports
- Strategic working level tools
- Tactical level access to key information for decision making

"Our mandate is to support owners and contractors with a superior method of organizing and managing projects."

Convero (www.convero.com) is designed and supported by the Technologies division of AMEC.

AMEC is a leading provider of engineering services and solutions worldwide– a company that creates value for its clients through the application of technologies, alliances and innovative partnerships.

AMEC recently merged with AGRA Inc, a leading North American professional engineering and environmental services firm. AMEC owns 41.6 per cent of SPIE S.A., the international electrical engineering, infrastructure and construction services company based in France, and has an option to buy the balance of SPIE in 2002.

Together, AMEC and SPIE employ 50,000 people in 40 countries with annualised revenue in excess of US\$ 8 billion. AMEC plc (LSE:AMEC) is headquartered in the United Kingdom. www.amec.com
